## LED LIGHTS

LED lights are easy to use and let you enjoy your pool at night.

# HYDRO AERATION TECHNOLOGY™

Intex® is proud to introduce our innovative Hydro Aeration Technology™ – transforming the Above Ground Pool industry, by bringing revolutionary water aeration techniques into your backyard above ground pool.

Precision engineered to fine tune our line of filtration systems, Hydro Aeration Technology™ has been incorporated into all our cartridge filter pumps, all sand filter pumps, and all combination filtration systems.

## IMPROVED CIRCULATION AND FILTRATION

Fine particles in water clump together and settle to the bottom of the pool during the aeration process, making it easier to filter and remove sediments through the filtration system. The improved filtration and circulation make the pool water healthier and more comfortable.

## IMPROVED WATER CLARITY

By mixing air with water, the aeration process induces oxidation of iron and manganese, eliminating staining in water. The result is sparkling pool water that looks and feels great!

## INCREASED NEGATIVE IONS AT THE WATER SURFACE

Increased negative ions have been proven to improve the air freshness around the pool as it removes air pollutants and neutralizes free radicals that affect air quality.

# KRYSTAL CLEAR® SAND FILTER PUMPS

Sand Filters are one of the most popular ways to keep pool water clean. Not only is it effective, it saves on cost and time since the sand needs replacement just once every five years – making the sand filter system one of the easiest to maintain. As an alternative, Intex Glass Filter Media (item# 29058) may also be used in place of conventional sand.

# POOL SANITATION SYSTEMS

## KRYSTAL CLEAR SALTWATER SYSTEM™

### The ECO-friendly Pool Water Sanitizer

The Krystal Clear Saltwater System™ combines a unique two-stage technology to sanitize pool water.

First, an undetectable level of natural swimmer-safe chlorine is produced when environmentally friendly natural salt is added to pool water and passes through a titanium electrolytic cell during the filtration process. The result is soft, fresh, clean water without the potential harsh side effects of packaged pool chemicals.

Second, with the E.C.O. (electrocatalytic oxidation) process, water molecules are split into highly powerful oxidants which destroy organic contaminants such as bacteria and algae. The combination of these powerful oxidants with natural chlorine results in the strongest and safest pool water sanitation.

This second process, unique to the Intex Saltwater System, provides consumers with an important benefit. The process of E.C.O. is so effective, the amount of natural chlorine needed and generated by the system is reduced by approximately 60%. Which means that your customers not only get the great benefits of a saltwater system, they enjoy it with much less chlorine than other saltwater systems generate!

# KRYSTAL CLEAR® OZONE AND SALTWATER SYSTEM

**Professionals Know That The Ultimate Pool Sanitation Method Is Ozone.**

Only Ozone provides virtually complete, instantaneous, odorless, all-natural sanitation of pool water. Ozone eliminates bacteria over 3,000 times faster than chlorine. And because it has up to 100 times the oxidizing power of chlorine, it cleans pool water without the chemical smell that swimmers often associate with chlorine.

Intex has brought this powerful technology together with the benefits of our saltwater system to provide your customers with the very best in above ground pool sanitation. By combining the incredible sanitizing strength of ozone with the great swimming comfort that saltwater systems provide, your customers can enjoy a truly wonderful pool ownership and great swimming experience for years.

A totally effective, odorless, effortless, all natural solution to maintaining crystal clear, soft, clean pool water... from Intex!

# COMBINATION FILTRATION & SANITATION SYSTEMS

## KRYSTAL CLEAR® POOLWATER SYSTEM

Sand Filters are one of the most desirable methods to keep pool water clear and sparkling. Not only does the all-natural, inexpensive sand do an excellent job of filtering the water, it needs replacement only once every five years, making sand filter the easiest maintenance filtration option on the market. As an alternative, Intex Glass Filter Media (item# 29058) may also be used in place of conventional sand.

Saltwater systems with E.C.O. (electrocatalytic oxidation) are known for their ability to keep pool water clean and safe, while eliminating the harshness of traditional packaged chlorine.

Intex has combined these two excellent systems into one product, providing above ground pool owners with ONE low cost, low maintenance system that will keep pools clean, safe, and comfortable for swimmers. Both systems are controlled automatically with one 24-hour timer to make daily operation carefree!

# MAGNETIC LED POOL-WALL LIGHTS

Lighting up an above ground pool has always been difficult. Unlike in-ground pool owners, who could flip a switch to light up their pools, above ground pool owners had to either cut a hole in their sidewall, risking leaks and damage to their pool or use a floating light.

The Intex LED light uses magnetic technology to create a light system that safely generates low voltage current THROUGH the pool's sidewall to a powerful LED light inside and outside the pool. The advanced, energy efficient LED light delivers more brightness to your pool than a conventional 50-watt halogen pool light. So now, above ground pool owners can light their pools up just like in-ground pool owners, but without the expense and damage of cutting a hole in their pool.

The LED Pool-Wall light is the ultimate in flexibility and can be attached to any sidewall in any location – and be easily moved to different parts of the pool for different lighting effects. If the inner light unit becomes separated from the outer power source, it will automatically float to the surface for easy retrieval.

Beauty, convenience, innovation, performance, and value – all part of the Intex LED Pool-Wall light!

- Lights both inside and outside of the pool
- Smooth changing multi-color
- Switches for mode selection
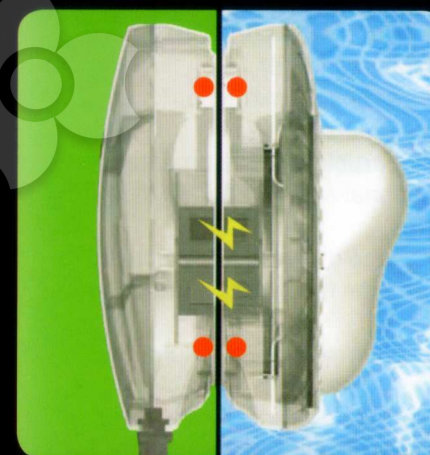

The outside unit transmits power safely and wirelessly to inside the underwater LED where the magnetic technology holds the two parts together.

- UL1563 "Electric spas" (USA standard for Spa)

Intex's commitment to excellence extends to helping our environment and supporting the ecosystem. It begins with product design. Intex's filter pumps operate on much lower amps than most filter pumps in the market, reducing electricity consumption. Our saltwater systems clean pools using only natural salt, eliminating the ongoing need for environmentally unfriendly packaged chlorine.

Intex also operates one of the most comprehensive recycling programs in the industry. We are one of the earliest companies in China to successfully obtain a license to ship consumer's returns in the original package back to China to be recycled. Therefore, used materials and product returns are prevented from going to landfills and instead re-used in the manufacturing process where up to 10% of annually produced PVC is recycled.

Intex designs all of our own packaging for our products. We constantly challenge our methods of packaging to improve efficiency and reduce waste. More compact packaging techniques save cardboard while cutting down on space utilization, saving freight and fuel consumption. As a manufacturer, Intex knows it has a responsibility to manage the amount of waste produced. As an employer of over ten thousand people, we also encourage our own employees to recycle, reduce waste, and be conscious of the environment. Starting from recycling corners for all our worldwide office facilities, our factory has worked with the local government as well as through sponsorships with key partners to strengthen our efforts to be more eco-friendly. Intex has worked to provide incentives and seminars to employees as well as setting targets to reduce energy consumption. In addition, Intex has made significant investment in technology to achieve these goals. For example, we have implemented a frequency converter system which converts diesel to natural gas, installed solar water heaters and set up a recycled sewage system, and invested in equipment that reduces gas emissions.

From product design, to more efficient processes that save energy and reduce waste, to a world class recycling program, to more energy efficient offices, the people at Intex are striving to provide the best value products anywhere while constantly keeping our global ecosystem in mind.

## ALL ELECTRICAL ACCESSORIES:

- Conforms to UL/CSA standards (110-120V models)
- CE approved (220-240V models)
- TUV-GS approved (GS designation models)

As a part of our program of product development and improvement, the detail specifications of the products shown in this catalog may be changed. For current specifications on any product, please contact your supplier of Intex products.

Intex introduces three additional designations in our catalog that highlight additional safety features that are included on a number of our pools. These designations are:

**EG** Pools with these letters after the 5-digit item code incorporate a GFCI (ground fault circuit interrupter) built into the filter pump. The GFCI unit is an added safety feature and is designed to instantly shut the pump off if electrical current comes into contact with water. GFCI units are included in all 110-120V filter pumps and saltwater systems.

**EH** Pools with these letters after the 5-digit item code feature ANSI/APSP-16 certified dual suction outlets in accordance with the latest ANSI/APSP-7 standard for Suction Entrapment Avoidance and the U.S. Pool and Spa Safety Act, and provide improved water circulation. These pools also feature pumps with an integral GFCI.

**GN/GS** Pools with the GN designation after the 5-digit item code either incorporate an RCD built into the 220-240V filter pump, or contain filter pumps that operate with a 12V step-down transformer, which reduces the voltage dramatically while retaining the same performance level as the 220-240V version. Both are designed to meet special national requirements in some EU markets.
